# Declaration of Quality

## Spring Hill's Proven Parent Fruit Trees Produce Bigger Crops of Superior Fruit

Pure bred livestock raised by modern methods from proven parents for foundation stock are far superior to ordinary or scrub stock. The science of horticulture proves bearing fruit trees in commercial production that have proven to be superior in size, color, vigor and production when used in grafting and budding nursery grown trees reproduce true. Therefore, nursery grown fruit trees propagated from proven parent trees are far better. Keeping records, scouting bearing orchards for bud wood cost more but you get better trees.

### There Are No Better Fruit Trees on the Market

Spring Hill's proven parent fruit trees are superior for big yields, color, size, quick bearing and vigor. Visit the nursery, see our acres of trees growing and our bud records. Superior strains of each variety.

## The Reasons for Buying Spring Hill's Fruit Trees

Your purchase of fruit trees is an investment of money, time and labor. Poor quality trees usually give poor results and your time and labor make them cost more in the long run. Check these points.

1. Height, age, and trunk diameter.
2. Trees of proven parentage grown in Northern climate that have disease-free certificate of inspection.
3. Reliable true-to-name varieties pruned by experts for sturdy branched tops; sprayed regularly for healthy growth and graded to American Association of Nurserymen standards.
4. Over 100 years' experience growing with 500 acres of

ideal soil and climate conditions for hardy plants. Our office staff keeps accurate records on all transactions and varieties.

5. We use up-to-date equipment and modern methods of production. Our cold storage and extensive packing, storage and sales buildings insure proper care and handling of perishable stock.
6. We work each year with experiment stations, universities, and commercial growers to improve our varieties.

### STATEMENT OF INSPECTION FOR TRUENESS-TO-NAME

To Whom It May Concern:

All the apple, pear, and plum varieties propagated and now growing in the nursery of Spring Hill Nurseries Co., Tipp City, Ohio, have been examined by the Massachusetts Trueness-to-Name Inspection Service. To the best of our knowledge these trees are true-to-name as they now stand in the nursery row. It is impossible to definitely identify peach and sour cherries but the trees were inspected and look to be free of mixtures.

### Most Delicious Fresh Fruit Flavor from Home Grown Trees

For Vitamins . . . apples are a good source of Vitamin C needed to keep teeth and bones healthy, to build body's resistance. Apples are also a good source of Vitamin A and food minerals.

### Directions for Planting Fruit Trees

Trees should be planted immediately after opening package if possible. Keep roots covered with damp cloth. Do not expose to sun and air. (See cut opposite). Dig hole large enough so that roots will not be crowded. Make separate pile of fertile top soil. Tree should be planted two inches deeper than grown in nursery. (Notice old soil mark around tree). Put fertile top soil around roots, breaking up so that there are no air pockets. Fill hole about two-thirds full, pressing earth down firmly. Water well. Fill hole to top. First year a mulch of well-rotted manure or compost should be used to hold moisture and build fertility. Do not let fertilizer or manure come in contact with roots or body of tree.

## Spring Hill's Early Bearing Apples

Why take chances with ordinary trees? See declaration of quality on opposite page. When two or more varieties are planted pollination improves yields.

## HISTORY OF OUR BUSINESS

### Peter Bohlender Stayed Home While Gold Miners Rushed to California

In 1849, Peter Bohlender, a poor, young immigrant from Bavaria, with no formal education, began growing fruit trees near Dayton, Ohio. Although he founded Spring Hill Nurseries with the smallest of shoe string beginnings he soon became recognized as a leader in Horticulture. People found they could depend on his plants. These people told their friends and slowly but surely the fame of the nursery spread.

Today in 1950 we have one of the largest and most modern nurseries, producing over one million plants each year which are shipped to every state in the union.

W. F. Bohlender, son, and H. N. Kyle, son-in-law, assumed active management for 33 years. In 1929 Tom Kyle completed his Horticultural schooling at O. S. U. and entered the business as production manager. In 1937 Tom and Howard Kyle, grandsons of the founder, assumed full ownership and management. For three generations or 100 years, the business has been continuously operated. Each generation has had a natural love for plants and all grew up working in the fields.

**Early Elberta - 7P2** - (Early, money-making strains). The fruit and trees are like Elberta. One of the most reliable, high quality, high yielding, early peaches. Fruit from Spring Hill's strain often ripens 10 days ahead of the regular Elberta.

**Late Elberta - 7P3** - (Big Elbertas to prolong the peach season). The leading late peach, big, yellow, freestone similar to regular Elberta. Good quality, very productive and a fine canning and freezing variety.

**Belle of Georgia - 7P4** - (Fine flavored, white flesh). Beautiful, big, red-blushed, freestone fruits with creamy white flesh. Trees strong growing, hardy and productive. Best to thin, as trees tend to over-load. Highest rated white peach by commercial growers.

Begonias grow best in a light, well drained, rich soil. 1/3 sand, 1/3 rotted manure, 1/3 good, rich loam is the ideal begonia soil. Pot plants – water sparingly until leaves are well started then increase water so soil is constantly moist but not wet. Set pot plants outdoors when danger of frost is past. ### How To Plant

### EVERGREENS

Plant evergreens immediately upon arrival as they have resin in their sap. Keep from sun and air. Dig hole 8 to 10 inches larger than the ball of earth or root spread. Set evergreen 1 to 2 inches deeper than soil marks on the trunk of the evergreen. Fill hole half full of rich top soil, firm well, then fill hole with water.

### Evergreen Digging Notice

All evergreens for shipping will be fresh dug from our field bare root and wrapped in moist peat. Present day delivery and packing costs make it too expensive to ship balled and burlapped. Our experience shows that bare root evergreens deliver better and grow just as good. Balled and burlapped evergreens available when you drive to the nursery.

## ROSA MULTIFLORA

### A Practical, Living Farm Fence

**25H9** - A cheap, stock-tight fence, quick, at 40% less cost than woven wire fence. Do not compare with the old time, space, and labor wasting osage orange hedge. Multiflora rose is different - plant as a permanent hedge, but you need not trim and if you ever want to move hedge it is quickly destroyed with 2-4-D or by clipping.

## The Miracle Asiatic Shrub

The easily grown plants make excellent cover, nesting facilities, and provide winter food for wild life. The natural propagation and successful wintering of game assures a growing supply for sportsmen.

Recognized and developed by U. S. Soil Conservation Service. Trial fences have been planted in the East, South, Middle West, and North West and proven successful.

The attractive plants grow 6 to 8 feet tall and 5 to 7 feet wide. Present recommendations are to plant 1 foot apart in a single row for livestock fence. The general use of Rosa Multiflora is just beginning but its value for cheap fence, game management, windbreak, protection to soil and crops will last for generations.

# Patented Everblooming Hybrid Tea Roses

Judged the World's Finest

"To Grow the Best, Plant the Best."

Patented roses are new varieties with outstanding merit that have been granted patent rights. This gives the originator protection and encourages him to continue his research. The eight patented roses pictured (A) (B) (C) (D) (E) (F) (G) (H) are all everblooming hybrid tea roses that will bloom profusely in your garden this summer.

AAR'S (Means All American Rose Selections) Trials are made for two years in nineteen test gardens in all climates and soils in America. Impartial judges from a non-profit national organization of America's leading rose judges and amateurs score each variety on a uniform point system. Only top-scoring roses good in every way are selected.
